▶ TECHNOLOGY OVERVIEW

The present invention provides an application of Arabic Hand Code translation system for deaf Muslims to learn Quran. The invented translation system comprises a receiving unit, a filtering unit, a searching unit, a test performing unit, and the outputting unit. The translation system invented according to the present invention is able to be used in computers, tablet or such other related electronic devices. The concept of Arabic hand code translation system is it will convert the Quran word into typography of hand-code language after being test with Hamzah Wasal Test, Mad Test, Sukun Test and Syaddah Test. The present invention is very useful to help deaf Muslims to read Quran correctly just like normal Muslims.
